EXAMPLE PROJECTS (See GitHub for codes and visuals)

Project 1- It's 5 o'clock Somewhere (https://github.com/nsuroghon/5-o-Clock-Somewhere)
- This application takes on its users taste preferences, and in return features some unique cocktail recipes that the user should enjoy.
- uses HTML, Materialize CSS framework, and Javascript. The aim of this project was to retrieve data from two API's and with interaction from the user return and display appropriate data.

Project 2- Youtwitch (https://github.com/manuelleungchen/YouTwitch)
- This application allows users to find live streams on the two most popular sites on the internet (Youtube & Twitch) so that instead of having to access both sites separately, users are able to search all active live streams under one simple website.
- built using Node and express server, Handlebars.js as the template engine, MySQL with a Sequelize ORM, deployed with Heroku, ytsearcher and twitch node library/package, Materialize CSS framework, and Javascript.

Project Name 3
- Details of project.
- Tools, techniques, and procedures used (e.g. jQuery, AJAX, calling "xyz" API, etc.)

Project Name 4
- Details of project.
- Tools, techniques, and procedures used (e.g. jQuery, AJAX, calling "xyz" API, etc.)
